

## Plumbing Reconnection

As a convenience to our customers, K&D Countertops offers a basic service to reconnect sinks, faucets and garbage disposals. However, our installers are not licensed plumbers and are not qualified to add new plumbing or reroute existing plumbing. It is always our recommendation that you contract with a licensed plumber to handle the plumbing work on your project. However, if you decide to have K&D Countertops reconnect your plumbing, be advised that in some circumstances, at our installer's discretion, it may be determined that the project requires a licensed plumber. At that point it will be the homeowner's responsibility and at their expense to contract with a plumber to complete the job. Please understand this will cause a delay in the completion of the project.

### IMPORTANT MEASUREMENTS:

**A** = Distance from the top of cabinet to the top of the drain pipe where it comes out of the wall.

**B** = Distance from the bottom of sink to the bottom of the the garbage disposal drain outlet. If no garbage disposal will be installed use 5 inches for this measurement.

**C** = Depth of bowl.

### CHECKLIST:

The following conditions must be met in order for K&D Countertops to perform the plumbing reconnection. If one or more of these conditions are not met a licensed plumber will be required.

- Working shutoff valves installed on hot and cold water supply lines
- Water supply lines are copper and in good condition
- All drain lines are white PVC plastic pipe and in good condition
- Measurement **A** is greater than **B + C**
- The sink and faucet being used must be new and not previously installed
